

Set for measuring cylinder leaks

YT-73055

The cylinder leak tester in gasoline engines is intended for quick and easy diagnosis of leaks in the combustion chamber. With the tester you can check the degree of engine wear by supplying compressed air to the cylinder and determining the percentage pressure dropped due to cylinder leaks. It detects i.e. piston ring damages, suction or exhaust valve damages, head gasket damages.

- measuring unit with a 100 psi (7 bar) manometer and cylinder leak indicator
- adapter for spark plug: M12 x 1.25 and M14 x 1.5
- hose with a quick coupler
- packed in a handy suitcase
