

Milling cutter

YT-82380

Strong and durable plunge router attachment designed for shaping edges, milling of grooves and carpentry joints. It is characterized by high precision of workmanship (required in the carpentry industry) and a comfortable grip enabling adjustment of rotations with the use of thumb – without the risk of losing control over the tool.

- cooper insulated winding
- parallel guide made of perfectly fitted elements facilitates guidance of the tool
- precise adjustment of the milling depth with the blockade of the set value ensures perfect processing
- smooth and safe adjustment of rotations without taking your hands off the operating tool
- protection of the motor and the operator when the cutter is jammed in the workpiece
- dust extraction connection
- max. 23500 rpm for fast and accurate operation
- max. cutter stroke: 55 mm
- tool holder: 8, 12 mm
- rubber cable with a length of 3 meters
- for use with cutters, e.g. YT-6801, YT-6803
