

Sets of drill bits for metal

Designed for professional applications: drilling in high-quality stainless steel, construction steel and cold rolled steel.

- HSS 4241 steel ensures several times faster drilling and maintains resistance to damage and blunting (maintaining geometry of drills)
- „split point” cross blade (with 135° apex angle) enables to drill without prior pointing) – this guarantees perfect centering
- they quickly dissipate heat when drilling in hard steel, without burning the drill bits
- lower coefficient of friction limits adhesion to chips and filings
- total length: 150 mm
- working length: 75 mm
- handle: 1/2" (in drills less than 12 mm respectively smaller)
- packed in plastic boxes
