

## Angle grinder

YT-82101

Intended for grinding and cutting steel, particularly inox stainless steel. When processing this type of steel it is necessary to adjust the rotational speed, which enables grinding without damaging the galvanised surface.

- high power prevents disc locking and increases the tool's durability
- 6-step rotational speed adjustment using a knob
- perfectly fitting gearbox with hardness of 53–56 HRC
- copper winding protected against overheating
- durable and convenient side on/off switch
- rotor and gearbox cooling air circulation protects the device against penetration by dust, also when working at high RPM
- soft start function
- function of maintaining fixed disc speed when working at low RPM
- thick rubber cable with length of 3 m, resistant to mechanical damage
